MTWAFIQ متوافق

MTWAFIQ supports enterprise transformation. We help an organization take a business problem to an approved Business Case, a delivery plan and a verified result, and we provide the programs, sector references and tools to do the work.

For Enterprise Clients

The problem

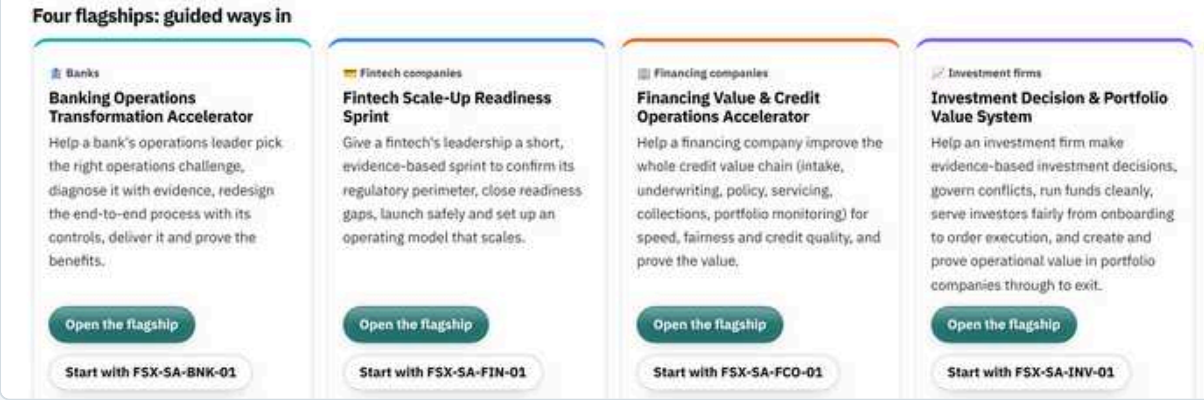
Teams treat symptoms when nobody names the real challenge.

Financial-services challenges and operating models

Name the real challenge, then walk it to a result

99 practical challenges for banks, fintech companies, financing companies and investment firms in Saudi Arabia and Egypt, each a ten-stage journey from diagnosis to verified benefits, with the operating model of each segment.

Who it is for: Strategy, transformation and risk leaders, and the teams that run change in banks, fintech, financing and investment firms.



Financial-services challenges, by segment.

What you get

- **Four operating models**
  How each segment is licensed, earns money, runs and changes.
- **Linked to the references**
  Each challenge is linked to the reference library and can be started as a journey in a Centers of Excellence workspace.
- **A baseline you can trust**
  A baseline stays "to be measured" until you enter a measured value with its source and date.

How access works

For Enterprise Clients
The challenges and the operating models, by a demo request.

> **Good to know.** A research draft, not legal advice. Your own compliance owner confirms which references apply, and using it does not secure compliance or any regulatory approval.

Your next step

Request a Demo www.mtwafiq.com/contact.html

Send a demo request with your work email and name your segment.

What happens next. You give your name, organization, role and intended business use. The MTWAFIQ team reads every request and answers by email. Sending a request commits neither side. Access starts only after approval.
